
[Cutting Slitting Line](#)

The cutting slitting line is used to cut a coil of material into a number of narrower coils. It consists of three main parts, that is, an uncoiler, splitter and recoiler.

We are a cutting slitting line supplier in China. Our cutting slitting machine is designed to cut various kinds of materials, like cold rolled coil, hot rolled coil, silicon steel plate, stainless steel plate, aluminum plate, etc. Featuring reasonable structure, easy operation, high efficiency and precision, it is increasingly used in the packaging, building materials, vehicles, household appliances, and other industries.

The following are three of our most popular products.

1. Cut to Length Unit

Manufactured using qualified materials, our cut to length unit is widely known for reliable quality, high performance, great durability and ability to withstand adverse conditions.

2. Vertical Cutting Unit

Our vertical cutting unit is a piece of vertical cutting equipment consisting of uncoiler, feeding device, shearing machine, recoiler, etc. It is built to cut a large roll into multiple narrower rolls, and is suitable for cutting tinplate, silicon steel plate, aluminium plate, galvanized sheet, and others.

3. Vertical Cutting Slitting Unit

Our vertical cutting slitting unit is designed for slitting various large roll materials, like stainless steel plate, color aluminium plate, cold rolled plate, galvanized sheet, etc. High productivity has made our slitting unit an economical choice for the automotive, packaging and building industries.

In order to offer customers better quality products, we constantly utilize advanced technology, equipment, and employ highly experienced staff. As a result of our tireless efforts, we are ISO9001:2000 certified. In addition, our forming machines are high quality, and thus are highly sought after by customers from Britain, France, Spain, and countries in the Middle East, Africa, etc.

If you have any queries, please feel free to contact our sales staff and they will be happy to assist in any way possible.
